

IN THE CLAIMS:

In Column 22, please replace Claim 1 with the following:

1. A sound reproducing system for a model train traveling on a plurality of rails that uses an amplified digital control signal for propulsion and control, the system comprising:

    a sound memory storing a plurality of sound effects at predetermined addresses;

    a controller connected to the sound memory for recalling the sound effects of either one or a plurality of sound effects in a predetermined sequence or a random sequence;

    a sound memory containing multiple samples that emulate a locomotive at various speeds and [work loads] work-loads;

    an integrated sound, motor and special effects controller controlled by a bi-polar digital signal, the motor and special effects controller reproducing the stored sounds contained in the model train; and

    a digital packet triggering a sound effect for automatic playback of a sound effect.
